

("") - replace instructions in quotes with whatever it tells you to do. then delete ("").

## Commands

Create a new git repository: git init ("project-folder-name")

Add changes from working branch to the commit: git add -A

Commit changes to working branch: git commit -m ("Notes for changes you are making.")

Push changes to working branch: git push origin ("branch-name")

Pull changes from working branch: git pull origin ("branch-name") (?maybe just git pull?)

## Branch

To create branch: git branch ("new-branch-name")

Change working branch: git checkout ("branch name")

Show working branch: git branch

## Merging

Merge changes (Change working branch to what you want to merge to): git merge Rivendell

### CONFLICTS:

When pushing or pulling if you have a merge conflict (Need to pull changes if you were originally pushing), manually edit conflicting code. (Moving code to different lines or editing lines).
